

Frozen Product Storage

January 1, 2025

RE: Proper Thawing of Frozen Product

Dear Valued Customer,

This letter is to confirm proper storage and thawing techniques for all our frozen juice products. Country Pure Foods' single-serve portion juices have a shelf life of one (1) year when stored frozen at 10° F or lower. Upon removal from frozen storage, our juices should be thawed and stored under refrigeration (34° F to 38° F). For best results, we recommend using all portion juices within 14 days from the initiation of thawing. Proper handling through the supply chain is critical to ensure the best quality juice and to prevent spoilage.

Please do not hesitate to contact us if we can further assist in this matter. Country Pure Foods appreciates your business and is committed to providing customers with safe, quality juice and beverages.

Sincerely,

Danelle Ayotte
Director of Food Safety & Quality Assurance
